

Mission Statement

C I Host's mission and overall principals can best be described in three main areas:

Focus

Our Total Broadband solutions provide dedicated internet access to Texas clients. We strive to continuously grow our client base by providing the highest quality of dedicated internet access solutions at the most affordable rates in the industry.

Commitment

We will strive to keep all our customers satisfied by offering the best technologies available, with a relentless dedication to quality of service, reliability, and support.

Reliability

With our multi-homed IP network, optimized routing, and dual core Cisco and Juniper CPE, our connectivity solutions are solid and secure.

The Internet Competition

MCI / UUNET and other major tier 1 backbone providers are currently charging 75% more for their IP services than our TotalBroadband T-1 Solutions.

Tier 1 providers are focused primarily on their large enterprise clients. The small to medium sized businesses often find themselves getting pushed to the end of the line behind the larger customers.

C I Host delivers outstanding customer service at the best price point in the market.

C I Host's network of upstream providers and peering arrangements will give customers an internet connection that is robust and optimized for the most efficient routing.

Bigger Network. Better Support.

TOTAL
BROADBAND

C I Host OfficeScreen

Connect and Protect Your Business!

A fully managed security and VPN solution for businesses that need secure connectivity and access for remote offices and mobile users.

Secure Access to the Internet that is scalable and specifically tailored to your office and business requirements.

24/7 network monitoring!

No hidden Cost!

There are no upfront installation or hardware costs, just one low monthly fee similar to your Internet service fee.

Keep hackers out of your network!

Many security exploits today involve hackers taking over weak endpoints (home or remote offices) to connect to main facilities as a trusted user.

The C I Host OfficeScreen technology stops this exploit by securing the remote sites and providing around the clock monitoring.

Secure and Dependable VPN Solutions!

Each OfficeScreen security bundle natively supports hardware accelerated IPsec VPN, utilizing best-of-breed multi-function security appliances.
